Nut roasting and special flavor line NOT 226

Roasting nuts is far more than heat treatment. It is a fine balance of temperature, time and the aromatic development of each nut. The Nut Roasting Line is a high-tech system designed for industrial precision and complete control over every stage of the process.

Built entirely from stainless steel and fully automated, it eliminates human error, minimizes losses and delivers a consistent, uniform roast, even in the most demanding production runs. Built to international food quality and safety standards, the line covers everything from the perfect roast to the full expression of flavor, with consistency and respect for the raw material.

Technical Specifications

Model	NOT 226
Capacity	300 kg/h
Power	30,2 kW
Dimensions LxWxH	8.00m x 5,00m x 3.40m
Net Weight	2.800 kg
